simdhaliwalux@gmail.com

Product designer specializing in enterprise and B2B SaaS products, spanning AI/ML platforms, APIs, and developer tools. I combine systems thinking, research, and code-based prototyping to lead complex product work and help teams establish shared design practices.

EXPERIENCE

Red Hat | Senior Product Designer | Apr 2024 - Present

- Redesigned and shipped AI model-access governance in OpenShift AI, giving administrators an actionable view to audit access permissions and usage limits, identify configuration gaps, and investigate issues. Led a cross-functional journey-mapping workshop and reviewed concepts with customer-facing specialists. Used interactive code prototypes to align stakeholders on interactions, API constraints, and delivery priorities.
- Led design consistency across a 20-designer team: established a framework for identifying, documenting, and developing patterns. Made guidance easier to discover and reuse, reducing feature-area silos by creating a searchable guideline index and templates; delegated and coordinated Figma library improvements. Synthesized 20 survey responses, 11 interviews, and a workshop to prioritize guideline discoverability and reuse.
- Designed and shipped AI model registration workflows for internally deployed and externally hosted models, covering model status, credential management, and provider routing.
- Built interactive prototypes with Cursor, Claude, React, and PatternFly to explore interactions, validate technical feasibility, and support design reviews. Partnered with product, engineering, research, and content design to resolve trade-offs and guide implementation.

Red Hat | Product Designer | Apr 2022 - Mar 2024

- Designed OpenShift API Designer from the ground up, from problem framing and research through information architecture, user flows, wireframes, and high-fidelity prototypes.
- Improved Service Registry workflows and designed new functionality with product and engineering.
- Refined requirements, validated designs, mentored designers, and contributed to PatternFly, Red Hat's design system.

Red Hat | Associate Product Designer | May 2021 - Mar 2022

- Led developer interviews, competitive analysis, and an engineering workshop to create CLI guidelines for Red Hat's application-services platform, covering commands, flags, output, errors, interactivity, and automation. Subsequent CLI releases included clearer flag descriptions, more actionable errors, and improved command documentation in areas addressed by the guidelines.
- Researched and usability-tested OpenShift Streams for Apache Kafka workflows. Built HTML, CSS, and JavaScript proof-of-concept prototypes in CodeSandbox to explore behavior and validate design ideas.

Boston University Spark! | Product Design Mentor | Sep - Dec 2021

Mentored student teams designing an open-source virtual assistant, advising on product and interaction design.

Hack for LA | UX Designer, Volunteer | Mar - Aug 2021

Contributed user-centered designs and reusable design-system elements for the 311 Data civic technology project.

Northeastern University | UX Design Project Co-lead | 2018 - 2020

Co-led United Way community-engagement and business-intelligence designs, using prototypes and formative/summative evaluation; researched and prototyped inclusion monitoring with Domain7 / Civil Space leadership.

EDUCATION

Master of Science in Computer Science | Northeastern University | 2018 - 2020

Focus: Human-Computer Interaction

Graduate Teaching Assistant, Human-Computer Interaction: mentored teams on industry-partnered UX projects.

B.Tech. in Electronics and Communication Engineering | 2012 - 2016

Usha Mittal Institute of Technology, SNDT University, India

SKILLS

Design & leadership: End-to-end product design, UX strategy, discovery, systems thinking, interaction design, information architecture, design systems, accessibility, design leadership, mentorship, handoff, implementation reviews.

Research & collaboration: User research, stakeholder interviews, usability testing, research synthesis, journey mapping, Jobs-to-be-Done, workshop facilitation, design critique, stakeholder alignment.

Tools & technical: Figma, Miro, Cursor, Claude, Jira, React, PatternFly, HTML, CSS, JavaScript; API workflows, AI/ML platforms, cloud services, code-based and AI-assisted prototyping.

Volunteering: Digital sustainability, environmental education, and citizen-science coral classification.
