simdhaliwalux@gmail.com

Senior Product Designer with 6+ years of experience turning complex problems into clear, effective product experiences, from 0-to-1 development to evolving established platforms. Leads ambiguous product initiatives through systems thinking, research, and technical understanding, with strengths in end-to-end product design, UX strategy, information architecture, and scalable design practices. Brings experience in design leadership, mentorship, hiring, and interviewing, backed by a technical foundation in computer science, APIs, AI/ML platforms, and code-based prototyping.

EXPERIENCE

Red Hat | Senior Product Designer | Apr 2024 - Present

- Led the UX redesign of OpenShift AI's Models-as-a-Service governance experience, helping administrators investigate model access from either a Model or Group perspective. Designed an Overview that connects authorization policies, subscriptions, and token limits, making it easier to trace a team's access, investigate reported token-limit issues, and identify incomplete configurations without cross-referencing separate pages. The Model view shipped in OpenShift AI 3.5.
- Led design consistency initiatives across a 20-designer organization, addressing the challenge of maintaining shared patterns as the product expanded across four product areas. Conducted 20 designer surveys and 11 interviews, established shared documentation templates and a searchable guideline index, coordinated a three-designer working group, and drove and delegated improvements to the shared Figma library.
- Designed and shipped end-to-end AI model registration workflows for externally hosted models, covering model status, credential management, and provider routing to support model onboarding across serving environments.
- Served as a UX lead and subject matter expert across OpenShift AI capabilities, partnering with product managers, engineers, researchers, content designers, and the PatternFly team to shape requirements, resolve design and technical trade-offs, and guide implementation.
- Built AI-assisted interactive prototypes using Cursor, Codex, React, and PatternFly to explore interactions, validate technical feasibility against API constraints and backend architecture, and support design reviews. Partnered with product, engineering, research, and content design to resolve trade-offs and guide implementation.
- Participated in two design hiring panels, evaluating candidate portfolios, design approaches, and problem-solving.

Red Hat | Product Designer | Apr 2022 - Mar 2024

- Designed OpenShift API Designer from the ground up, contributing to product framing, research, information architecture, and end-to-end API design workflows. Explored how developers could create designs from scratch or existing sources, edit and manage API definitions, and work with external tools and services.
- Helped shape broader product workflows around Git and Apicurio Registry integrations, including source synchronization, versioning, branching, merging, and collaborative editing. Considered how these capabilities could support API design across development workflows.
- Designed new Service Registry capabilities and improved existing workflows, translating product requirements and subject-matter-expert input into user flows, prototypes, and implementation-ready designs.
- Led design coordination for Service Registry and API Designer, organizing work across designers, tracking priorities and progress in Jira, reviewing design work, and helping maintain a cohesive experience across related services.
- Collaborated with engineering and content specialists through implementation, conducted UI reviews, mentored fellow designers, and contributed components and patterns to PatternFly, Red Hat's open-source design system.

Red Hat | Associate Product Designer | May 2021 - Mar 2022

- Led developer interviews, competitive research, and an engineering workshop to establish UX guidelines for Red Hat's application-services CLI, covering command structure, flags, errors, and usability. The guidelines informed subsequent improvements to flag descriptions, error messages, and command documentation.
- Researched and usability-tested OpenShift Streams for Apache Kafka, identifying interaction issues and developing design recommendations for new and existing workflows.
- Built interactive proof-of-concept prototypes using HTML, CSS, and JavaScript to explore and communicate design solutions.

Boston University Spark! | Product Design Mentor | Sep - Dec 2021
Mentored student teams developing an open-source virtual assistant, providing guidance on product thinking, interaction design, and evaluating design solutions.

Hack for LA | UX Designer, Volunteer | Mar - Aug 2021
Contributed user-centered designs and reusable design-system elements to 311 Data, a civic technology project supporting local Neighborhood Councils.

Northeastern University | UX Design Project Co-lead | Sep - Dec 2020
Co-led university projects spanning community engagement and business intelligence, contributing to research, information architecture, prototyping, and usability evaluation. Collaborated with organizational stakeholders on concepts for community participation and inclusion monitoring.

EDUCATION

Master of Science in Computer Science | Northeastern University | 2018 - 2020
Focus: Human-Computer Interaction

B.Tech. in Electronics and Communication Engineering | 2012 - 2016
Usha Mittal Institute of Technology, SNDT University, India

SKILLS

Product Design
End-to-end product design, 0-to-1 product development, UX strategy, product discovery, problem framing, interaction design, information architecture, systems thinking

Research & Leadership
User interviews, usability testing, research synthesis, journey mapping, workshop facilitation, design critique, design mentorship, hiring and interviewing, cross-functional collaboration

Design Systems & Tools
Design systems, design patterns, Figma, PatternFly, interactive prototyping, React, AI-assisted prototyping, APIs and developer workflows, enterprise AI/ML platforms, Cursor, Claude, JavaScript, HTML, CSS, Jira, Miro

Volunteering
Digital sustainability, environmental education, and citizen-science coral classification
