simdhaliwalux@gmail.com

Specializing in enterprise B2B SaaS, AI/ML platforms, APIs, and developer tools. Combines systems thinking, research, and AI-assisted prototyping to lead complex product initiatives, shape design practices across teams, mentor designers, and contribute to hiring and team growth. Turns ambiguous problems into intuitive, impactful experiences.

EXPERIENCE

Red Hat | Senior Product Designer | Apr 2024 - Present

- Redesigned and shipped OpenShift AI model-access governance, giving administrators an actionable view to audit access permissions and usage limits, identify configuration gaps, and investigate issues. Led a cross-functional journey-mapping workshop and reviewed concepts with customer-facing specialists. Used interactive code prototypes to align stakeholders on interactions, API constraints, and delivery priorities.
- Initiated and led a six-month design consistency initiative across a 20-designer organization, managing a 3-designer working group. Synthesized 20 survey responses and 11 interviews to identify opportunities, reduce feature-area silos, and improve discoverability and reuse. Established a framework for identifying, documenting, and developing reusable patterns, guidelines, and templates; created a searchable guideline index and delegated Figma library updates.
- Designed and shipped AI model registration workflows for internally deployed and externally hosted models, covering model status, credential management, and provider routing.
- Built AI-assisted interactive prototypes using Cursor, Codex, React, and PatternFly to explore interactions, validate technical feasibility, and support design reviews. Partnered with product, engineering, research, and content design to resolve trade-offs and guide implementation.

Red Hat | Product Designer | Apr 2022 - Mar 2024

- Designed OpenShift API Designer from the ground up, from problem framing and research through information architecture, user flows, wireframes, and high-fidelity prototypes.
- Improved Service Registry workflows and designed new functionality with product and engineering; refined requirements, validated designs, mentored designers, and contributed to PatternFly, Red Hat's open-source design system.

Red Hat | Associate Product Designer | May 2021 - Mar 2022

- Led developer interviews, competitive analysis, and an engineering workshop to define CLI guidelines for Red Hat's application-services platform, covering command structure, usability, and automation. Subsequent releases included clearer flag descriptions, more actionable errors, and improved command documentation in areas covered by the guidelines.
- Researched and usability-tested OpenShift Streams for Apache Kafka workflows. Built HTML, CSS, and JavaScript proof-of-concept prototypes in CodeSandbox to explore behavior and validate design ideas.

Boston University Spark! | Product Design Mentor | Sep - Dec 2021
Mentored student teams designing an open-source virtual assistant, advising on product and interaction design.

Hack for LA | UX Designer, Volunteer | Mar - Aug 2021
Contributed user-centered designs and reusable design-system elements for the 311 Data civic technology project.

Northeastern University | UX Design Project Co-lead | Sep - Dec 2020
Co-led United Way community-engagement and business-intelligence designs, using prototypes and formative/summative evaluation; researched and prototyped inclusion monitoring with Domain7 / Civil Space leadership.

EDUCATION

Master of Science in Computer Science | Northeastern University | 2018 - 2020
Focus: Human-Computer Interaction

B.Tech. in Electronics and Communication Engineering | 2012 - 2016
Usha Mittal Institute of Technology, SNDT University, India

SKILLS

Design & leadership
End-to-end product design, UX strategy, discovery, systems thinking, interaction design, information architecture, design systems, accessibility, design leadership, mentorship, hiring collaboration, handoff, implementation reviews, cross-functional collaboration, user research, stakeholder interviews, usability testing, research synthesis, journey mapping, Jobs-to-be-Done, workshop facilitation, design critique, stakeholder alignment.

Tools & technical
Figma, Miro, Cursor, Codex, NotebookLM, Jira, React, PatternFly, HTML, CSS, JavaScript; API workflows, AI/ML platforms, cloud services, code-based and AI-assisted prototyping.

Volunteering
Digital sustainability, environmental education, and citizen-science coral classification.
